

## Checks Slipping or Misreading?

Clean read heads, transport belts and rollers regularly for efficient and accurate check reads.

### How Does Waffletechnology Work?

Waffletechnology is an advancement in cleaning card technology. The Cleaning waffles are flexible raised platforms. These platforms allow the card to clean previously unreachable areas within the card reader. Now more dirt is removed making your reader cleaner and more reliable than ever before.

Waffletechnology MICR / Check Reader Cleaning Cards

### Ideal Cleaning on

Check Readers

Check Readers are designed to read the coded routing and account numbers on the bottom of each check. They use a magnetic head to read the information. The unit also has transport belts and or rollers to move the check through the pathway. By moving the check over the magnetic head, the check is read and the information available on the viability of the account.

Waffletechnology MICR / Check Reader Cleaning Cards are designed to remove these contaminants quickly from the magnetic read heads, clean the transport mechanism and the pathways. Safe and effective, this product is inserted as you would any check into the machine, making it very easy to use. As it feeds through, it cleans the check reader, bringing the equipment back to full functioning operation in seconds.

Available in boxes of 15 cards
